Description Soft neoprene pellets fill this unique ball that has a combination of fabric and mesh that creates a parachute effect which slows the flight of the ball. Perfect for early development in learning to throw and especially catch with no fear. Slightly larger than the 4" ball, and can be used for juggling, however really more efficient for teaching striking (including kicking/footbag or use with a racquet/paddle), balancing, pain free dodge ball, and an endless number of other fun activities. Originally designed for use in adapted PE and still one of the best products in this field!
