Description Soft neoprene pellets fill this unique playground sized ball that has a combination of fabric and mesh that creates a parachute effect which slows the flight of the ball. Perfect for early development in learning to throw and especially catch with no fear. Amazing alternative to volleyballs/playground balls/ basketballs/etc. for learning striking, balancing, pain free dodge ball, and an endless number of other fun activities. Try substituting this large success ball for many harder play balls to decrease fear or pain factor for early learners. Originally designed for use in adapted PE and still one of the best products in this field!
